

Crest Award Project - 56

BRIEF BACKGROUND

A local clothing company needs to expand into new products and wonders whether they could start up producing 'T' shirts. The company has done some market research and believes that there is a niche in the market to sell 'T' shirts suitable for a child or young teenager, to be worn on holiday. They know little about the process and expect you to advise them on all aspects of selection and production. These items often get dirty quickly and information on the dyes and washing is important

YOUR TASK

1. Investigate dyes and dyeing methods, research different substances or natural materials that could be used as dyes in the past.
2. You will need to do some research into dyes, perhaps visit or take advice from national or local dye companies, carry out some marker research, look at the web, etc
3. Devise or carry out some tests with dyes, possibly for stability, maybe practise tie-dyeing, etc.
4. Compile a neat record of all of your scientific findings. Produce sample 'T' shirts and an illustrated advice sheet for the company, on all aspects of the production of 'T' shirts.
5. Complete a CREST profile to the satisfaction of your teacher.
